To whom it may Concern,

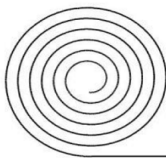

We here at BlueScope Steel Ore Preparation Department, have been utilizing CBM's Conveyor Belt Monitoring services on a continual basis for approximately 20 years. Through their service we have saved hundreds of hours in unscheduled down time and lost production, by early detection of belt and splice related damage. Forecasting the end of our belting life has also proved invaluable for budget justification.

In our opinion it has been one of the key factors in allowing us to budget our belt expenditure and maintenance schedules. CBM reporting has always been detailed and comprehensive, and the fact that they are independent with no affiliations to any one belt manufacturer, assures us that the reports we are receiving are not skewed or biased.

I believe that we will continue to work together with CBM for many years come, and for this reason I would personally recommend them to any company that requires this type of service.

Best regards,

Jason Ross

LOOKING AFTER YOUR
CONVEYOR NEEDS

To whom it may concern,

We have engaged CBM International many times for their expertise in their field regarding scanning of conveyor belts, during which time they have helped our business with excellent support in all areas of belt scanning and monitoring of conveyor belts. Remote scanning has made the task of capturing data much simpler and time effective.

A number of factors have helped in our decision to use CBM International, belt life projections, thickness readings and visual readings have been an important factor in increasing our belt life and coupled with a safe work ethic we can safely use their services with confidence.

As CBM International deals with mines in Australia and overseas, this also gives us confidence in their company and the service that they convey. As our conditions change, CBM International has been flexible in helping meet those needs.

I can recommend CBM International as a reliable supplier of service to this Industry.

Sincerely,

Peter Wheelhouse
Director
Western Conveyor Services Pty Ltd

WE CHOOSE CBM

CBM Client's have stated the following;

➤ Recognition

CBM is a worldwide leader in Conveyor Belt Monitoring. With millions of kilometres of belt monitored. CBM has a long tradition of R&D and bringing to market beneficial technologies.

➤ Knowledge & Expertise

Technical knowledge and constant training of staff and distributors, ability to provide timely targeted information, are strengths that we appreciate.

➤ Independence

CBM is completely independent of the conveyor belt manufacturers. Their systems are designed to work on all conveyor belts, of any speed and all material types.
